INTRODUCING

# Prisma Studio

The easiest way to explore and manipulate your data in all of your Prisma projects.

```
$ npx prisma studio
```

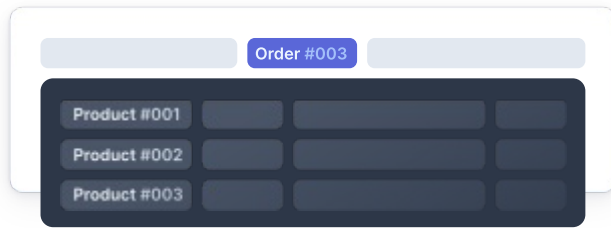

Prisma is an ORM for JavaScript and TypeScript. [Head over to the docs](#) to learn more!

## Understand your data

With a simple tabular interface you can quickly have a look at the data of your local database and check if your app is working correctly.

Interact with your Data with **full CRUD** functionality.

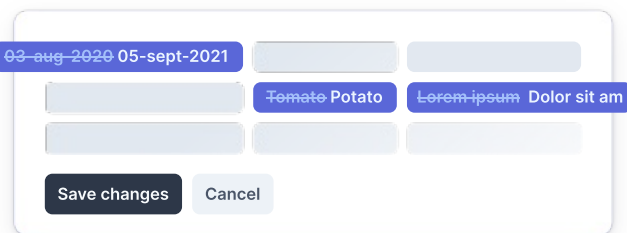

View your data any way you want *by filtering, sorting and paginating* it.

## RELATIONAL DATABASES

### Access relations

Studio makes it easy to access and navigate related data from both sides of the relation. Just click on the relation field and drill down into related models.

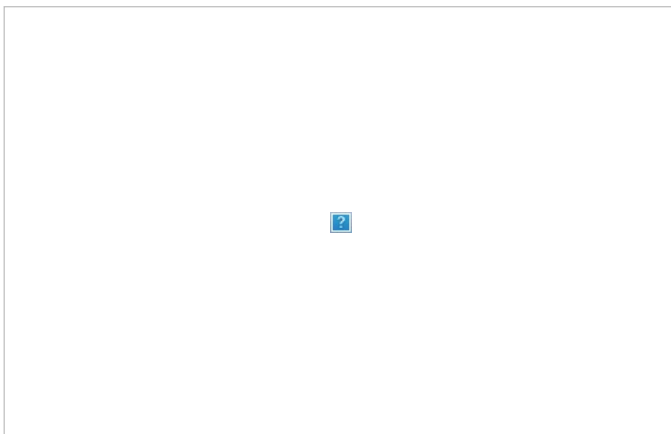

## DATA ENTRY

### Safely edit in place

Like spreadsheets, double click on a cell and edit its value on the spot. Don't worry about accidental changes, all edits have to be confirmed first.

### Embrace the dark side

Match your OS theme or just reduce eye strain by switching to Prisma Studio in dark mode.

### Available on all major platforms

Run it from the command line with `npx prisma studio`
