We simplify
database queries

so you don't have to
figure out how

Let your team ship features faster, and leave the database complexities to us.

Get started with ORMLearn about Prisma Postgres®

Prisma

trusted by **K** active monthly developers

Build data-driven applications — with a great DX

Prisma provides the best experience for your team to work and interact with databases. Even complex things like connection pooling, caching, real-time database subscriptions are a breeze with our products.
Build your application, **fortify** to make everything run smoothly, and **grow** with your users and requirements.

New release!

Instant Postgres for Global Applications

- Deploy instantly
- Built-in connection pooler, global cache, real-time reactivity

[Deploy a DB nowLearn more➜](#)

BuildFortifyGrow

Build

Build. STREAMLINE YOUR DEVELOPMENT

Easily build applications with our intuitive tools, simplifying database interactions, schema evolution, and data management. Lay a solid foundation for your application while ensuring adaptability to future needs.

orm

Talk to your database easily

Open source Node.js and TypeScript ORM with a readable data model, automated migrations, type-safety, and auto-completion.[Explore Prisma ORM➜](#)
STUDIO

Explore and manipulate your data

Interact with your data in a simple tabular interface with full CRUD capabilities, filtering, sorting, and safe editing directly in the model cells. [Learn more about Studio➜](#)

Fortify

Fortify. CONSISTENT PERFORMANCE

Ensure that your database and queries are running at peak performance and efficiency. Easily handle connections to your database and scale with your traffic with [Accelerate](#), with no infrastructure to manage.

OPTIMIZE

AI-driven query analysis

Gain deep insights and get actionable recommendations to improve your database queries, making your app run faster.Learn more about Optimize→

ID	Recommendation
#1	Excessive number of rows returned ⓘ
#2	Query will force the database to scan the full table ⓘ
#3	Query on unindexed column ⓘ

Grow

Grow. ADAPT AS YOUR APP EVOLVES

Scale confidently with infrastructure that adapts to your application. Prisma expands your application's capabilities to handle increased traffic and work with your database in completely new ways.

Accelerate

Up to 1000x faster queries

Easily set up a global cache and a connection pool for your database to enable a lightning-fast experience for your users as your application grows.Explore Prisma Accelerate→
Pulse

Database-event driven compute

Power real-time functionality with simplified, type-safe database subscriptions. Easily enable workflows and actions that react to changes in your database.Explore Prisma Pulse→

Works with your stack

Bring your own database and framework, and change it as you'd like. We'll make sure everything continues to work seamlessly so you have the flexibility to evolve without constraints.

Loved by developers globally and across industries

We **adopted Prisma conventions as our standard**, and it saves lots of time having from reinventing things ourselves.

Yuval Hazaz
CEO Amplication

Thanks to Prisma, we can seamlessly **scale our applications** without concerns about data layer performance.

Matti Nannt
Co-FounderFormbricks

Underrated: Prisma
Entire SaaS businesses have been built on top of the Prisma ecosystem— including OSS ones like Dub.co. Have been loving the recent performance improvements as well

Steven Tey
FounderDub.co

With Prisma, we **migrated a core production system from MySQL to SQL Server with zero downtime** simply by swapping a few references and updating our schema. I can't imagine building systems without it; it's instrumental to major projects at Lush.

Niko Guerra
Senior Backend Engineering ManagerLush

Prisma helps us **unify data access** from multiple enterprise systems into a single API. It means we can move very quickly whilst staying flexible.

Tom Hutchinson
Head of MobileRapha

Prisma has a low learning curve. Productivity becomes higher because it gets combined with end-to-end type-safety using TypeScript.

Ricardo Almeida
Software EngineerGrover

It's the kind of DX that lets me get stuff done in between my daughter's naps.

Nicolás Torres
Fullstack EngineerBackbase

I have been using Prisma since day one, and it has become my number one choice for ORM. It's the default in @supastarter, and even though things like Drizzle might be more lightweight, the **DX of Prisma is just unbeaten**.

Jonathan Wilke
Frontend devJuniqe

Prisma Accelerate handled 670,000+ webhooks from Shopify when the orders webhook from 2022/23 was fired, which cost us about $11.

Not bad for accidentally being DDoS'd to a Heroku Postgres instance with **zero downtime**, and all the entries made it through.

Harshdeep Singh Hura
Shopify App Developer and Consultant@kinngh

Prisma spares me the hassle of keeping my database in sync, allowing me to develop my product with complete confidence.

Dries Augustyns
FounderPlunk

I like how the Prisma docs made it easy to jump straight into using it without needing to do a huge amount of reading, and I instantly felt the benefits.

Daniel Cranney
Developer AdvocateWeAreDevelopers

Huge fan of Prisma! The Schema file is great for Cursor. You literally never have to write a CRUD operation again.

Jake Colling
Experimenting with LLM powered apps

I've been building the backend on @stockleapp with Prisma since the beginning, and I've got to say, it has worked like a charm

Joonatan
Building Stockle App

I keep switching from Prisma to whatever the latest flavor is, but always end up coming back to Prisma.

Ian Hunter
Pushing electronsOpenSeas

Accelerate is a perfect fit for landing pages. We take advantage of caching to speed up queries and reduce latency, making them lightning-fast. This means we have a faster landing page, leading to better conversion.

Blake Carroll
CTOSolin

I love how Prisma makes my life as a developer so easy. The TypeScript autocompletion is the best I've used, having tried many different ORMs. The migrations are a breeze. And I love how easy it is to get a full view of your database from the Prisma schema file. It's all in one place in readable format.

Elie Steinbock
Founder Inbox Zero

I love the Prisma typing system! Stack Auth relies heavily on it.

Zai Shi
Co-founderStack Auth

Prisma enabled me to easily manage authentication as well as users' paid status. Prisma Accelerate was a huge boost to my productivity, cutting latency issues I was encountering with Vercel SQL.

Cody Bontecou
Founderi18nlocale

What I love most about Postiz is Prisma. It lets me switch between SQL databases effortlessly. I've used other ORMs before such as Eloquent (Laravel), but nothing matches Prisma's typing and features!

Nevo David
FounderPostiz

Prisma's typesafe SQL is a great feature. It fills a great abstraction gap that existed prior to this. Earlier, I would have to fall back straight to pgtyped.

Harshal Patil
Staff EngineerMeister

Imagine never typing out a migration again. Yeah, that's basically what Prisma does for you. Has saved me literal hours of time, and can for you too.

Chris Lis
Dev EducatorChrisCourses

We **adopted Prisma conventions as our standard**, and it saves lots of time having from reinventing things ourselves.
